SKILLS

PLATFORM & INFRA

- Platform Engineering
- CI/CD & Security
- Release Engineering
- Infrastructure as Code (Terraform)
- Kubernetes
- Containerization
- GitHub Enterprise
- GitHub Actions
- Google Cloud Platform (GCP)
- Monitoring & Observability

SOFTWARE

- Python (FastAPI & Flask)
- Javascript
- API Design
- Automation

DEV EXPERIENCE

- Internal Tooling
- Technical Documentation
- Mentoring

AI & PRODUCTIVITY

- Claude Code, Open AI, Gemini
- AI-Assisted Software Development
- LLM Integration

SUMMARY

Platform engineer who ships software. I have 6+ years of experience building developer platforms, cloud infrastructure, and software delivery systems that help engineering teams move faster and operate reliably at scale.

EXPERIENCE

SENIOR SOFTWARE ENGINEER (ENABLEMENT)

The Home Depot, Atlanta GA

DEC 2025 - PRESENT

- **Led the planning and full implementation of OpenAI across The Home Depot Corporation** — responsible for enterprise-wide rollout, ongoing support, maintenance, and integration into new and existing applications.
- **Served as the primary technical point of contact for enterprise AI initiatives**, partnering with engineering teams to integrate AI tooling into development workflows at scale.
- **Led a platform simplification initiative by migrating workloads to a managed Kubernetes platform** and redesigning service ownership boundaries, **reducing operational complexity across engineering team**.
- **Reduced deployment workflows from 8+ operational steps to 4 predictable stages**—build, test, scan, deploy—reducing cognitive overhead and making releases safer and more repeatable.
- **Built reusable repository templates with standardized deployment patterns** and **parameterized Kubernetes configurations**, enabling application teams to deploy independently without deep Kubernetes or Terraform expertise.
- **Centralized secrets management into a native secrets tool**, eliminating the fragile pattern of threading secrets through multiple Terraform abstractions and deployment layers.

AUSTIN EDMONSON

SOFTWARE ENGINEER

EXPERIENCE (CONTINUED)

SENIOR SOFTWARE ENGINEER (DEVELOPER TOOLS)

The Home Depot, Atlanta GA

FEB 2025 - DEC 2025

- **Architected and delivered a critical CI/CD migration to a new on-premises Kubernetes cluster**, resolving complex authentication, network proxy, and GitHub EMU runner-group challenges that had blocked the initiative.
- **Reduced annual infrastructure cloud compute costs by \$65,000** by migrating high-usage engineering teams from GitHub-hosted runners to self-hosted runner infrastructure.
- **Improved runner scalability and availability by 45% through the migration from Actions Runner Controller (ARC) v1 to ARC v2.**
- Accelerated vulnerability remediation by **resolving a high-priority legacy webhook exposure affecting Terraform Enterprise workspaces in under 15 minutes** through targeted API diagnostics and cross-team coordination.

SYSTEMS ENGINEER II (DEVELOPER TOOLS)

The Home Depot, Atlanta GA

2023 - FEB 2025

- **Developed self-service migration tooling that enabled engineering teams to independently migrate thousands of repositories from on-premises GitHub Enterprise to GitHub Enterprise Cloud**, significantly reducing migration effort and support overhead.
- **Architected and implemented GitHub Actions Runner Controller (ARC) infrastructure** across on-premises and Google Kubernetes Engine (GKE) environments, enabling scalable self-hosted runner capacity for enterprise CI/CD workloads.
- **Built an enterprise Google Artifact Registry platform using Terraform Enterprise**, integrating cross-project IAM, Workload Identity Federation, and GitHub Actions runners to provide secure, scalable artifact management for engineering teams.
- **Owned and supported critical developer platform services including GitHub Enterprise, Artifactory, and enterprise artifact management systems**, ensuring reliable software delivery across engineering organizations.
- **Integrated Google Kubernetes Engine (GKE), Artifact Registry, and GitHub Enterprise Cloud into the organization's CI/CD platform**, accelerating adoption of cloud-native development practices.

AUSTIN EDMONSON

SOFTWARE ENGINEER

PROJECTS

PARTIDA - FOUNDER

- Built an immigration technology platform from zero, owning product, engineering, and infrastructure.
- Onboarded 15 families into beta and partnered with immigration attorneys to validate workflows.
- Built with FastAPI, PostgreSQL, Firebase Auth, HTMX, and GCP.

SELECTED OPEN SOURCE CONTRIBUTIONS

- **Spotify API Library** — Identified and fixed a shared mutable state bug that caused cross-instance data leakage, improving correctness and reliability.
- **GoCardless Python SDK** — Fixed a public API defect affecting rate-limit handling and added regression test coverage.
- **GoCardless Python SDK** — Expanded automated test coverage for the pagination system, improving reliability and maintainability.

EDUCATION

BACHELORS

University of California, Davis
2010 - 2015

EXPERIENCE

SYSTEMS ENGINEER I (DEVELOPER TOOLS)

The Home Depot, Atlanta GA
2021 - 2023

- Built automation tools using Python and Bash to improve operational efficiency.
- Contributed to infrastructure migration projects supporting the transition from on-premises systems to cloud platforms.
- Developed foundational experience in CI/CD, cloud infrastructure, and platform engineering through hands-on delivery and mentorship.

SYSTEMS ENGINEER

Acoustic AI, Washington DC
2020 - 2021

- Leveraged Bash and Python scripting to automate routine network system checks, enhancing the efficiency of extensive data gathering tasks.
- Served as an on-call engineer for critical log collection and data processing services, diagnosing and resolving production incidents to maintain system availability and data integrity.

DEVOPS INTERN

Shadow-Soft, Atlanta GA
2019 - 2020

- Led a cohort of 10 students through Linux Foundation Certified System Administrator (LFCS) preparation, achieving a 90% certification pass rate.
- Developed hands-on experience with Linux, Ansible, Puppet, Terraform, Kubernetes, and cloud infrastructure through an intensive infrastructure engineering training program.
- Earned LFCS certification while building foundational skills in system administration, automation, infrastructure as code, and container orchestration.
